

BINDER

1K DIRECT TO METAL

Quick and effective to use, this robust single layer coating system has been formulated to deliver good adhesion when applied directly onto clean bare metal surfaces. As a result, it is an ideal choice for situations where the main focus is on convenience, combined with achieving a good appearance and basic corrosion protection.

Featuring a fast drying time, 1K Direct To Metal has the added advantage of being straightforward and easy to use which makes it a great option for DIY projects, as well as for traditional industrial and commercial applications. In addition, the option of using a 'normal' or 'slow' reducer provides application flexibility when faced with higher application temperatures or for larger jobs.

What's more, the colour range is outstanding – taking advantage of the SELEMIX® universal tinter system, 1K Direct To Metal can be mixed in almost 10,000 different colours, including AS2700 and RAL ranges, as well as different gloss levels.
