ACRYLATED ENAMEL TOPCOAT

For a long list of features that include a fast through-dry time, excellent flow and levelling, impressive gloss and robust UV stabilisation for long-term durability, you can't go past Acrylated Enamel. This single pack, premium acrylic alkyd-based topcoat is formulated to deliver top-quality, dependable performance on all general industrial applications. It's designed to be applied over most properly prepared substrates, including metal, fibreglass, timber and existing paintwork in sound condition.

There is flexibility, too, with the option of using 'normal' or 'slow' reducer to help cater to higher application temperatures or for larger jobs. Along with the choice of gloss levels – from matt, to semi-gloss, to full gloss – Acrylated Enamel also offers an outstanding colour range. Indeed, by utilising the SELEMIX® universal tinter system, it's available in almost 10,000 different colours, including the AS2700 and RAL colour ranges.
