BINDER

CHLORINATED RUBBER

The Commercial Performance Coatings Chlorinated Rubber binder, in combination with the SELEMIX® System tinter range, gives users the ability to mix colours from an extensive colour palette in a quality paint that has good chemical resistance.

Applied over correctly prepared and primed surfaces, this topcoat provides good resistance to chemicals in damp environments. Its water resistance and anti-skid properties make it suitable for use in environments that include exposure to industrial and natural acids, for example, road marking, stairs and storage equipment.

It is not recommended that users apply Chlorinated Rubber when repairing or painting swimming pools.
