BINDER

ETCHPRO PRIMER SURFACER

Commercial Performance Coatings EtchPro Primer Surfacers is a single pack, epoxy resin based etching primer with excellent adhesion to a large number of metal surfaces including mild steel, zinc plated steel, zincanneal, aluminium, chrome, galvanized iron, brass, copper, stainless steel, lead and alloys.

It can be used as a low film build conventional etching primer or as a metal primer at higher film builds.

The EPS binder is formulated on the technology of the very well established EtchPro Primer. This provides the same primer performance with the added benefit of mixing in a wide range of colours utilizing the SELEMIX® System tinters.
