PRIMER

GALVAPLAS

Convenient and cost-effective, GAL Galvapas is a single pack, sacrificial-type primer with a formulation that comprises no less than 24% zinc content. This helps it deliver a level of galvanic protection for prepared steel surfaces that is superior to inhibitive zinc chromate primers.

Whether spray applied or brushed on as a 'cold gal' style primer, its reliable corrosion protection and resistance to underscore corrosion means it's suited to a variety of applications. This includes steel window and door frames, bare steel seams, weld lines and in shed construction, as well as being an excellent option for the touch up of welded galvanised surfaces.

GAL Galvapas is designed to be overcoated with an alkyd topcoat, such as ACE Acrylated Enamel, RDE Rapid Dry Enamel, PET Performance Enamel Topcoat and HFE Hammer Finish, from the Commercial Performance Coatings range. A choice of two reducers, for 'small areas' and 'large areas', makes it easier to effectively deal with different sized jobs.
