HAMMER FINISH ENAMEL

Commercial Performance Coatings Hammer Finish Enamel is a fast air-dry, spraying enamel based on a copolymer alkyd resin which has been pigmented with aluminium flake in order to create a decorative, patterned finish.

Designed as a general purpose industrial enamel pattern finish, it is ideal for use where speed of drying is important. It can be applied over bare steel or properly prepared surfaces, including metal and timber, and typical uses range from sheet steel, agricultural equipment, vehicle chassis and engines, to furniture, cabinets and electrical switchboards.

By utilising the SELEMIX® universal tinter system, Commercial Performance Coatings Hammer Finish Enamel is available in a range of standard colours.
