PRIMER

PARALOC

Developed and manufactured locally from high quality raw materials, this single-pack, chromate-free, epoxy-modified acid-etching primer has been formulated to deliver excellent adhesion. As well as being easy to use, PAR Paraloc was specially designed to provide an effective solution for the priming of new trailered aluminium boats on areas above the waterline but is also ideal for a variety of other associated general applications.

As a result, it can be relied on for strong corrosion protection when applied over a large range of substrates, including non-ferrous and ferrous metals. Although it's a non-sanding primer, it can be lightly de-nibbed if required. PAR Paraloc is available in beige or black and is designed to provide a solid foundation for 2-pack topcoats.
