PRIMER

VINYL ETCH

Thanks to its unique formulation, VIN Vinyl Etch Primer avoids the downside of conventional etch primers while delivering a highly sought-after combination of features and benefits. Available in light grey and black colours, it offers outstanding adhesion to all metal surfaces, including non-ferrous metals, such as aluminium, copper, zinc and stainless steel, and chrome plated steel.

Unlike conventional etch primers which can only be applied in extremely thin coats, VIN Vinyl Etch Primer has been designed for a higher film-build per coat. As a result, it can be applied like a normal primer where it can be relied on to deliver good film-build and gloss holdout. What's more, this single pack, fast drying primer cures to a flat, smooth finish and can be used in high productivity Wet-On-Wet mode where it also delivers very good gloss holdout.
