PRIMER

ZINCOTE 10

Featuring an exceptionally rich, 61% zinc content, ZIN Zincote 10 is a premium quality, single pack, sacrificial primer that protects structural and general steel work and resists underscore corrosion. It can be spray applied or brushed on as a 'cold gal' style primer.

Although, generally used as a maintenance primer for zinc coated steel, it's also a highly protective primer for regular steel surfaces. Thanks to its zinc rich content, ZIN Zincote 10 provides a level of galvanic protection for prepared steel surfaces that is superior to inhibitive zinc chromate primers.

It's designed to be overcoated with an alkyd topcoat, such as ACE Acrylated Enamel, RDE Rapid Dry Enamel, PET Performance Enamel Topcoat and HFE Hammer Finish, from the Commercial Performance Coatings range. When correctly topcoated, it's suitable for coastal-type and medium industrial environments. A choice of two reducers, for 'small areas' and 'large areas', makes it easier to effectively deal with different job sizes.
